

## Alarm Messenger

The iPort Alarm Messenger is an automatic alarm monitoring and notification paging system designed specifically for those applications looking to monitor alarm points from remote locations. Encased in durable metal housing the Alarm Messenger paging system monitors up to 16 [expandable to 32] preprogrammed contact closure or opto isolated call points. Each message can be up to 40 characters in length and custom programmed via PC through an RS232 serial port interface. The modem will automatically send the message to the assigned wide area pager. The alarm escalation feature enables you to elevate the page till it is answered properly. Programming features include pager database, group call, alarm escalation and wide area paging carrier[s].

### TECHNICAL SPECIFICATIONS

Recipient capacity	8 Pagers / phones
Group capacity	8 Groups / 8 members
Alarm capacity	16 Alarm inputs
Carrier capacity	8 Carriers
Supported protocols	TAP / PET / IXO
Dialling modes	Either DTMF or Pulse
Data format	300 - 9600 Baud
Programming	via PC Interface
Diagnostics	via Dial up modem
Message length	40 characters
Alarm Programming	Normally Open / Closed Initial delay (999s) Repeat page time (999s) Number of repeats (99)
Dimensions	11.1x 8.7x 1.1 inches
Weight	2.8 lb

The Alarm Messenger system includes: 8 pager capacity, 16 alarm contact or opto isolated call points, RS232 serial port with programming software, dial out modem for up to 8 wide area paging carriers, power supply and heavy metal housing.

#### Features:

- 16 alarm points / contact closure or opto isolated
- Alphanumeric or Numeric pagers
- Individual or group call capability
- PC Programmable
- 8 pager capacity
- Alarm page call escalation
- Wide area paging capability

#### Options:

- 16 additional contact alarm points

#### Benefits:

- Low Cost
- Remote paging capabilities
- Immediate alarm notification
- Durable construction

#### Markets:

- Fire and Security
- Industrial / Manufacturing
- Municipal / Water
- Communications
- Agriculture
